

TRAN DINH THUAN

FRESHER AI ENGINEER | LLM - RAG - AI AUTOMATION

Phone: 0327407353 Email: fanntn1405@gmail.com Address: Dong Da, Ha Noi
GitHub: github.com/ThuanTrD

PROFESSIONAL SUMMARY

Fresher AI Engineer candidate with hands-on experience in LLM/RAG workflows, n8n-based internal chatbot automation, NLP applications, computer vision and data preprocessing. Able to build practical AI workflows from data preparation, prompt/API orchestration, semantic matching and model evaluation to demo/API integration. Interested in AI backend services, agentic workflows, tool use, Docker/MLOps fundamentals and production-ready AI systems.

EDUCATION

Thuy Loi University - Artificial Intelligence and Data Science | 2022 - 2026 | GPA: 3.0/4.0

- Research Experience (2023-2024): Applied AI to develop an automated system for evaluating satisfaction levels of enterprises, organizations and citizens.

CORE SKILLS

Programming	Python, SQL basics, Git/GitHub, Google Colab, Jupyter Notebook
AI/LLM Workflow	LLMs, RAG, embeddings, semantic matching, prompt engineering, API orchestration, n8n workflow automation
ML/DL	Data preprocessing, feature engineering, supervised/unsupervised learning, CNN, LSTM, transfer learning
Backend & Tools	FastAPI/Flask basics, REST API integration, Webhook/HTTP Request, Streamlit, Docker fundamentals
Languages	English: Intermediate Korean: Fluent

PROJECT EXPERIENCE

Internal AI Chatbot Automation with n8n | 2025

Tech: n8n, Webhook, HTTP Request, LLM API, prompt workflow, internal knowledge/FAQ automation

- Built an internal chatbot workflow in n8n to receive user questions, call LLM/API services and return contextual responses.
- Designed workflow steps for input handling, prompt construction, API calling, response formatting and basic error handling.
- Connected user queries with internal knowledge/FAQ sources to reduce repetitive information lookup tasks.

Recruitment Information Extraction and Job Matching System | 09/2025 - 12/2025

Tech: Python, NLP, LLM, BARTPho, Vistral 7B, semantic matching, CV parsing

- Built an AI workflow to summarize CVs, extract candidate profiles and compare CV content with job requirements.
- Applied text summarization, information extraction and semantic matching to support job-candidate suitability assessment.

UAV-based Cashew Leaf Disease Detection System | 2025 - 2026

Tech: YOLOv8m, YOLO11m, EfficientNet-B0, MobileNetV3-Large, PyTorch, OpenCV, CVAT

- Built a two-stage CV pipeline: abnormal region detection from UAV images followed by disease classification.
- Achieved 98.73% test accuracy with EfficientNet-B0 on Anthracnose, Leaf Miner and Rust classification.

Educational Support Chatbot | 03/2025 - 06/2025

Tech: Python, NLP, embeddings, semantic retrieval, chatbot pipeline

- Developed a chatbot that receives free-text student questions and returns easy-to-understand learning responses.
- Built a pipeline for query preprocessing, question understanding, semantic matching and response generation.

Korean Speech-to-Text Conversion System | 09/2025 - 12/2025

Tech: Python, Whisper, ASR, audio preprocessing, WER evaluation

- Developed an ASR system to convert Korean speech into text using deep learning-based speech recognition models.
- Performed audio normalization/noise reduction and evaluated transcription quality using Word Error Rate (WER).

JOB-RELEVANT STRENGTHS

- Good fit for AI/LLM application work: n8n workflows, API integration, prompt orchestration, embeddings and semantic matching.
- Comfortable with end-to-end experimentation: data cleaning, model training, metrics, error analysis, demo preparation and workflow automation.
- Learning-oriented mindset with interest in agentic workflows, AI backend services, Docker, monitoring and inference optimization.
